After the use of bloodhounds for tracking criminals still survives, another ancient use of these dogs seems to have died out. Bloodhounds were at one time often called upon to assist an army in the field, the forces with which the earl of Essex suppressed the Irish rebellion in the time of Elizabeth, for instance, being accompanied by 800 dogs. In the Scottish clan feuds and the wars between England and Scotland bloodhounds were regularly employed in tracking fugitive warriors, and both Wallace and Bruce were hunted in this manner. Wallace is said to have baffled his pursuers by killing a follower and leaving the corpse for the hound to find, while Bruce adopted the less cruel plan of wading some distance down a stream and ascending a tree which overhung the water.

Protective Device.
When a telephone line is electrostatically charged the telephone acts as a condenser. The winding serves as one plate of the condenser, the frame of the receiver as the dielectric and the person who is holding the receiver to his ear as the other plate of the condenser. In order to prevent this condenser from discharging through the person, a German inventor provides a grounded metallic cover for the receiver, the capacity of which is somewhat greater than that of the body.

No More Gold Lace for Afghans.
The ameer has published an edict which applies to all parts of Afghanistan, prohibiting the import into the country of all kinds of gold lace, including embroidered kullas lungis and embroidered shoes. The ameer is evidently actuated by a desire to prevent his subjects from spending their hard earned money on showy dress. It is the poorer classes who are notoriously addicted to this extravagance which his majesty has decided to check. The gold laced coat of the Afghan is decidedly handsome, and although the ameer has acted wisely in bringing into general use clothing less costly, his majesty's orders will doubtless be received by his subjects with rather mixed feelings.

Proper Bestowal of Charity.
Dickens: There are not a few among the disciples of charity who require in their vocation, scarcely less excitement than the votaries of pleasure in theirs; and hence it is that diseased sympathy and compassion are every day expended on out-of-the-way objects, when only too many demands upon the legitimate exercise of the same virtues in a healthy state are constantly within the sight and hearing of the most unobtrusive person alive. In short, charity must have its romances, as the novelist or the playwright must have his.

THE ORIGINAL HAIR GROWER
We Grew Our Hair, Now Let Us Grow Yours with **PORO** TRADE MARK REGISTERED.

When we first began our wonderful work of growing all kinds, all qualities, all lengths, and all conditions of hair, even to the growing of hair on bald places of the head, many persons scorned the idea that such a thing was possible; but we have grown the hair for hundreds; rapidly achieving success. The proof of the value of our work is that we are being imitated and largely by persons whose own hair we have actually grown and the further fact that they have very frequently mentioned us when trying to sell their goods (saying that theirs is the same or "just as good") or referred to PORO. We advise you to use only PORO Hair Grower, (the oldest and best of its kind.) See that the name PORO is on every box, not genuine without it. Prepared only by Mrs. A. M. POPE.

Beware of imitations, Call, or address mail to **MRS. A. M. POPE-TURNBO**, 3100 Pipe Street, ST. LOUIS, MO

College Course in Politics.
To Columbia university belongs the credit of offering the first course designed to give students a practical knowledge of the conduct of political affairs. That institution has asked the bureau of municipal research in New York to give the members of the class the benefit of the experience it has derived from the study of the affairs of that city, and the invitation has been accepted. The growing demand for the adoption of the scientific methods of city governments lends support to the view that college men will be in demand in this department of the public service, hence the propriety and usefulness of a university course established on the lines indicated by the innovation at Columbia.

Haitians a Lazy Lot.
Sydney Brooks, writing to the London Chronicle about Haiti, says the Haitians were the first people in the world to abolish slavery, and Mrs. C. R. Miller, writing in Leslie's Weekly, says of Haiti: "In that little republic, covering about 10,000 square miles, within five days' sail of New York, one may encounter more strange complications and a greater disregard for human life than in the remote countries of the east. Situated in the very heart of the West Indies, where civilization exists in a high degree, Haiti alone has kept her doors closed to progress. She became an independent state more than 100 years ago. Her rich lands were already under cultivation, but the lazy natives allowed the plantations to go to ruin, and for easts have grown up instead."

Farm Employment for Criminals.
Gov. Harris of Ohio believes that criminals can be employed on a farm with advantage to themselves and the state. He proposes that prisoners in the penitentiary who are not confirmed criminals be transferred to the reformatory and put to work on the state farm. "It is the conditions of our cities that breed crime," says the governor. "Most of it can be traced to idleness and drink, and idleness is frequently the cause of drink. There is little drink in the country and practically no idleness. If the young man who had slipped over the bounds of a law were taught scientific farming he would come to like it and escape the associates who carry him down when he returns to the city."

Milk an Intoxicant.
New York City alone consumes an annual 840,000,000 quarts of milk. We drink 2,300,000 quarts a day. And this does not include mothers' milk for infants; just cows' milk—watered and unwatered, for both infants and adults. "Milk," says Emerson, "is readily made intoxicating in warm climates simply by agitation." This feature was quickly discovered. Being placed in a skin and slung from the shoulder or over the back, it was agitated by the motion of the huster and fermentation was soon well under way. The skin was undoubtedly none too clean, some milk of the previous day being left in it, which would act as a leaven.
