2250 W. Ohio St.,
Chicago, Illinois.

Gentlemen:

For an experimental purpose I am badly in need of 1/2" stack of rotor and stator punchings such as are used in a small motor. My purpose would require that these punchings have the same number of slots, this number being between 20 and 40. The diameter of the rotor punchings should be between two and three inches, and, of course, the stator punchings should correspond in size.

Any help that you can give me will be greatly appreciated.

Sincerely yours,

J. V. Atanasoff,
Associate Professor of
Mathematics and Physics.
