Dear Dr. Pennell,

Some time before Prof. J. B. Ellis died, I sent him a *Cercospora* on *Zinnia bracteata*. He said it was a new species and asked me to name it.

I should like to call it *Cercospora bracteata* or *C. bracteata*, as it occurs only on the bracts of the plant as far as I have been able to observe.

What do you think of it? I haven't the slightest idea how to go about naming it. Do you have to describe and publish it? Any information will be thankfully received.

Love to all.

Sincerely your pupil,
 Geo. W. Carver
