GEORGE W. CARVER  
Director Department of Agriculture  
and Experiment Station

*Will you  
please answer  
L.H.P.*

Tuskegee Institute, Ala., Sept. 18, 1907

Dr. L. H. Pammel,  
Botanical Dept., Ames, Iowa.

My dear Dr. Pammel:

Please let me know if <sup>an</sup> ~~the~~ incubator used for hatching chickens could be made use of for Bacteriological purposes, such as the growing <sup>of</sup> pathogenic organisms.

We have no <sup>gas</sup> ~~cast~~ with which to run a Bacteriological incubator, and it occurs to me that one used for hatching chickens might be substituted; although, I do not know enough about it to give reliable information.

We have had an epidemic of Typhoid fever this summer and it has been traced to two sources of our water supply. I have now something over 63 tests to make, and I have found some very interesting germs. I have found one that <sup>bomus</sup> ~~forces~~ a curious <sup>blutid</sup> ~~fluidid~~ mass in an ordinary Saccharine solution. I want to isolate it. Any information will be thankfully received. With kindest wishes to all, I beg to remain,

Yours very truly,

*Geo. W. Carver*

Dict. to E.A.C.
