Dr. Paul L. Errington  
Iowa State College  
Ames, Iowa

Dear Paul:

I have read the paper and like it up to the point where I lose the thread of your argument at the bottom of page 3. This evidently sets forth some new thought of yours with which I am not familiar, and I seem unable to grasp it from the written account.

Other than a few purely editorial suggestions, I have no improvements in mind except one: It might be well to introduce on page 3 or 4 some specific suggestions as to what studies of what species in the game field are most needed to further develop your theory. The reasons why you select these particular studies might also be indicated. This would make the present paper sufficiently different from your previous ones to counteract the charge of repetition. As the paper now stands, it might readily be said that it is repetition, although, of course, from my personal point of view the theory is important enough to warrant an indefinite amount of repetition.

I am glad to have your opinion that the stipends stipulated in the letter to Jay Darling are too low. I am writing him to this effect.

With best regards,

Yours sincerely,

Aldo
