Dr. Ralph E. Yeatter
Ill. Natural History Survey
Urbana, Illinois

Dear Ralph:

I am just working on the long delayed paper with Errington and graphing the Hunt City data. Now that another year has gone by, could you give me the 1942 spring and fall populations for prairie chicken and quail? One more point on each of these graphs would aid greatly in determining whether they mean anything.

I will send you a copy as soon as the drafting and printing can be done.

With personal regards,

Yours as ever,

Aldo Leopold
Professor of Wildlife Management

P. S. To save you the trouble of writing a letter, you can just fill in the blanks below.

		<u>Spring</u>	<u>Fall</u>	<u>Increase</u>
Quail	1941	88	215	142%
"	1942	—	—	—
Prairie Chickens	1941	162	201	24%
"	" 1942	—	—	—
