Dr. L. H. Pammel,
Ames, Iowa.

Dear Dr. Pammel: — Last winter we had some moldy corn in the Botany Laboratory, on which was growing a mold similar to *Diplodia* and various others of that nature.

I left the remainder of the corn in Miss Fing's room I think. If it is convenient, will you please send me a piece of it? If you have any difficulty in finding it or for any other reason find it inconvenient so not consider it.

I am working on fungi now, with the idea of getting a general knowledge of the whole group and as much specific knowledge as time will permit, and thought I might find use for that fine collection growing on the corn.

Dr. Moore told me that he met you while in Boston. Was sorry not to have seen you as well as the other Botany people when I was home.

but had the pleasure of seeing Mrs.
Pammel and the girls for a few
minutes.

With regards to all the Pammels
and the Botany dept.

Most sincerely,

Ada Hayden.
