

Thanking you for your kindness

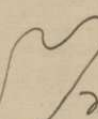

Edw Hayden. 2712

Jan. 12, 1917.

P.S. The check for 37.50 was not
just for Jan. but a correction
& supplement of the previous
check to cover work of which
together comes Nov. Dec. & Jan.
According to your statement
I may find more

Dear Dr. Samuel:-

Your letter was received
this morning. You have
put in the day's work for a
week. About 40 mi. back of station
find a great many fossils. Can
nothing more be seen? There
is a great amount of fine
material. I have seen a lot of
both. Do you want samples
of the fossils? I have many
fossils? I have many fossils
-ling the fossils. I have
I want to make a collection
of the fossils in the summer.
When I get home. I have found
some interesting fossils in
the water. There is one with

that leaf type   etc. - with
a roughish  named nut with
relatively large scales, leaves evergreen
& smooth. - Another with same
leaf type but downy underneath
& deciduous. Agaves are smooth
& oblong. Both are large trees.

Has the material been satisfactory
that I have sent? - I know it is not
just Class - at this time of year
but do you think it is worth
while. I thought we could
use more of it for Class or
exhibitions. Of course I don't know
how it arrived.

Uncle Sam has sent your letter.
I will write Uncle Jim.

I would like to have the
camera and some films. I
would like to get pictures of the Oak
Islands - Oak-in-divided trees &
there is a piece of prairie which
has been in fire & allowed to rest
has been uncut for 2 years
& so nearly all the prairie plants
has returned & pines are com-
ing in rapidly.

I wonder if the camera and
2 balls of string could be packed
in that oil cloth lined, covered
market basket (in Room 3-3?)
