

Chicago, Nov. 3. 12

Dear Miss Butler:

Will you pardon me? I mislaid your letter and have been searching for it for the past two weeks to get your address, but I will venture to address this letter care of Professor Needham. Just at present I am at home, very much under the weather with the real oldfashioned 'Fever and Ague', the kind that makes you shake! I dont know where the mosquitoes came from that favored me with the plasmodial beasts, but all I know is that I am dining on quinine till I cant hear good.'

I am glad indeed that you have got at work on some scientific problem; I felt sure while you were here that you could do good science work.

I see by today's paper that Leffingwell is back again after his three years sojourn in the frozen north. I should think he would have enough of the Esquimaux and polar bears by this time.

Rollin Chamberlin has been back here from South America for several months and is now teaching in the department of Geology. He looks the same as ever, and seemsto enjoyed his stay among the wilds of Brazil.

Adams is Director of the Arkansas Experiment Station and Bendrat is professor of Geology inU of S. Carolina; I dont know where the other members of the class are.

Mykind regardsto Professor Neeham.

Sincerely yours,

S. H. Williston
