Assume the moorhen was at Forney Lake rather than Waubonsie WA. Right?
Sorry, right.

Assume King Rail was near Waubonsie WA where everyone else was seeing
one.
Right again.

Do you have ages on the 6 Little blues. Would like to include that if
possible. adults, immaures, calicos?
4 adults, 1 immature, and 1 calico

The Bairds sandpiper was very early. Do you have any details on it?
Well, it was a black-legged peep with wings extending beyond the tail. No white
rump in flight. Adult bird I presume since it was grayer than the juvies I see.
Not a lot of buffiness. Back still looked pretty scaly, however.
