

June 4, 1998

Hi Tom,

Here are the records that I have for IBL for spring 1998:

5-15-98	1	Connecticut Warbler	Seen singing in Canfield area of George Wyth State Park, Black Hawk Co.
5-15-98	3	Mourning Warblers	In Canfield area of George Wyth State Park, Black Hawk Co.
5-30-98	1	Connecticut Warbler	Seen singing in camp ground, George Wyth State Park, Black Hawk Co.
5-31-98	1	Northern Mockingbird	1st House, E. side of hwy, N. of jct. Hwy 150 and Hwy 187, S. of Fayette, Fayette Co.

There were the usual numbers of Cerulean (10 - 12), Blue-winged (10 - 12) and Kentucky Warblers (~8) in various areas of Yellow River State Forest, Allamakee Co. Also had a Yellow morph male House Finch in my neighborhood in Waterloo for the past month or so.

Thanks for all your help and efforts with the records committee, I really appreciate what you have done for the committee and know that you have set an excellent course for the next person who decides to take that challenge.

If you need anything else please do not hesitate to call or write. See you soon.

Francis
