Jim:

= 6 July

Andy Clements and I were at Lake Aquabi State Park Monday morning and Andy heard a Northern Parula singing in a tree near the swimming beach. We located it with binoculars and both of us got a clear look at it; no question on identification. The tree was in a park area on the east side of the lake with mowed grass and scattered trees. I forgot to identify the tree. Lake Aquabi has some extensive forests of oak, hickory, black locust, and elm-ash.
