

Tom,

I did a printout of my "first sightings" of the year and red marked ones of note. Added some on the back of one sheet, and added to some listings. I hope this isn't too much. I thought first sightings would be important - The 2nd two quarters are sure to be much smaller lists. If I need to trim it down let me know.

Thanks

Dave Killman

\* see back

## Common Tern

Was seen sitting on a stump from the middle of the dike. Watched w/ scope for at least 10 min. Could easily see the black topped red-orange bill and black tipped wings. Bob Sanny was with me and saw the same.

## Least Tern

Was seen at the large ponds at the "west valley" as I call it. Actually private property wonderfully developed and rumored to be soon donated to the county. It's west and south of Fairfield, south of the new Jefferson Co. Park. trail soon to connect to Libertyville on the RR grade. Anyway Jack Eastman and I watch this fly and fish (dive) (but not all the way in I noticed) for 1/2 hour. Got a good size comparison from the local Kestrels. Saw the Black tipped wings and white on the forehead.
