Anhinga
CA 1889
near Salem, Henry Co., IA
Walter G. Savage
Anderson 1907

Record Number: 81-AD Classification: NA

## REFERENCE

Anderson 1907 DuMont 1933

VOTE (1981) 6-IV, 1-V

IV, Savage seems to have been reliable.

IV, Savage was a good observer, had the dead bird in hand, and was familiar with the species with which it could be mistaken.

IV, no details.

IV, Probability: species for IA is extralimital but the edges of its range are only a few 100 mi to south. Second hand report of a specimen taken 20 yrs earlier. Specimen not preserved. No description of specimen given by either Anderson or DuMont. Anderson's vouching for the collector's knowledgibility makes the record possible.

IV, No description of the bird exists. However, Anderson believed record to be authentic (alhough I don't think this is sufficient to elevate to category III).

## Anhinga

Anderson 1907 pp 160-161 The only known record of the occurrence of this species in Iowa was given me by Walter G. Savage in a letter of Feb. 25, 1904. He says: "About twenty years ago one was killed in Henry county. This one is the only record that I have of any being in the state. I have no specimen; it was killed before I put up any, but I well remember the bird as being the Snakebird. It was killed on a little stream called 'Little Cedar,' in Henry county, Iowa, near Salem, and the man knew what a Cormorant was and

so did I. It is a positive fact that a Snakebird was killed in Iowa." Although reported by no other observers, Mr. Savage's long experience as a collector and observer of bird migrations makes this record appear an authentic one."

The species was reported in Bruner's list as a Nebraska bird on the authority of a specimen shot supposedly near Omaha, but it has since developed that the bird may have been secured either in Iowa or Missouri (Rev. Bds. Neb., 21-22).

## Anhinga anhinga (Linnaeus). Water-Turkey

Accidental. Anderson (1907) states: "The only known record of the occurrence of this species in Iowa was given me by Walter G. Savage in a letter of Feb. 25, 1904. He says: 'About twenty years ago one was killed in Henry County. This one is the only record that I have of any being in the state. I have no specimen; it was killed before I put up any, but I well remember the bird as being the Snakebird. It was killed on a little stream called "Little Cedar," in Henry County, Iowa, near Salem, and the man knew what a Cormorant was and so did I. It is a positive fact that a Snakebird was killed in Iowa.' Although reported by no other observers, Mr. Savage's long experience as a collector and observer of bird migrations makes this record appear an authentic one.

"This species was reported in Bruner's list as a Nebraska bird on the authority of a specimen shot supposedly near Omaha, but it has since developed that the bird may have been secured either in Iowa or Missouri (Rev. Bds. Neb., 21-22)."
