11/30/89

Hi Carl,

Here's my latest offering -
first time on the computer.
A few extraneous bits of info.
I'll delete next time.

Details on Golden Eagle:

11/4/89 DeSoto NWR - IA side

large eagle, dark, with white
base on tail and at base of
primaries. white visible both
~~not~~ ventrally + dorsally, although
white on primaries much more
restricted + distinct on dorsal
wing - well defined "windows."
Wings were held above the
horizontal when gliding towards
us.

Other observers: Dave Stage, Laurel, NE;
Gail Barells, LeMars, IA & many others
less knowledgeable.
