

## SUMMER REPORT 1990

WESTERN KINGBIRD: One seen on breeding bird route north of Perry on June 9.

PURPLE MARTIN: Most pairs ever to nest 102 but nest success lowest. Still fledged over 300 young.

EASTERN BLUEBIRD: Number of nests was down by 25 percent. Nest failures were up also. So not a good year here.

HOUSE FINCH: Numbers just keep going up. But still no conflict with other species seen yet.

Good Birding,

Darwin (Dean) Mosman
