Bird Documentation Form

Yellow-crowned Night Heron - 1 immature, 23 July 1979

Willow Slough, NE Mills County, Iowa

Description: Large heron. Gray brown. Wing flight feathers gray. Small light spots. Legs yellow. (the second time I saw the bird, they seemed greenish yellow). Bill seemed thick when I got a glimpse of it.

Habitat; behavior: Twice I flushed the bird from the edge of the cattail patches. Flew away from me with slow, dignified wing beats.

Other birds eliminated by description: Bitterns have black, not gray. Flight feathers in wings. Immature Black-crowned Night Heron has larger spots, a more streaked appearance.

Note: both night herons were present at the slough last year.

Weather: ~~no~~ important wind. ^{Solidly} Overcast, but bright.

Distance: Within 25' once, a bit farther the other time.

Binoculars: 8.5x

Tracks: none with me in the field when I took notes on the thing

Experience with night herons: I saw immature Black-crowned Night Herons a few times last year, but I haven't seen a young Yellow-crown before.

Written July 26, based on
notes taken in the field

Barbara L Wilson

Very, please see
the notes that you have
written about this

Insufficient evidence to eliminate either A. bittern
or BCNH.

Comparisons not distinctive, only "seemed like"

She should have taken more notes in the field &
also either copied ^{precisely} those notes here or attached them.

Description: large brown. wing light feathers gray
small light spots. legs yellow. (the second time I saw the bird
the second year I saw it. Bill seemed to be white. I got
a copy of it.

Notes: I found the bird from the edge of the
cattail bog. From every farm we visit along
the edge of the bog.

Notes: both night herons were present at the clearing
last year.
Heron has large spots on its neck.
Flight feathers in wings characteristic Black-crowned Night
Heron. Bill black. Bittern has black at tip.

Notes: I saw a Black-crowned Night Heron in the
clearing. It was very close to the other two.
I saw it in the clearing. It was very close to the other two.
I saw it in the clearing. It was very close to the other two.
I saw it in the clearing. It was very close to the other two.

Notes: I saw a Black-crowned Night Heron in the
clearing. It was very close to the other two.
I saw it in the clearing. It was very close to the other two.
I saw it in the clearing. It was very close to the other two.
