Field Report - Summer 1999

Golden-winged Warbler - adult male seen on 6/17 and 6/19. Location was a brushy pasture usually inhabited by Blue-winged Warblers. Although I spent over four hours at this eastern Warren County ^{location} I never saw a female Golden-winged or Blue winged Warbler. I also never heard the Golden-winged sing.

Hooded Warbler - The two territorial males at Lake Aquabi continued singing through June. The birds territorial fidelity broke down beginning in July which is about a month earlier than last year.

Common Yellowthroat - 6/19 a male and female yellowthroat were each feeding a different Brown-headed Cowbird fledgling. Same location as Golden-winged warbler.

Yellow-breasted Chat - same eastern Warren Co. location. At least two singing males through 6/19.
