Birders:

This morning, June 27th, at 8:30 A.M. and again at 10:45 A.M. I observed 2
adult and 2 young Sandhill Cranes. The location was in the northeastern
most corner of Allamakee County, about 1/2 mile south of the HWY 26 bridge
over the Upper Iowa River. The location is known locally as Bakewell's Pond
(which has consistently supported a nice population of Yellow-headed
Blackbirds). The 4 cranes were feeding in knee high corn about 500 feet
east of the highway/railroad tracks, on the north side of the pond. I have
observed 2 adult cranes in this same area irregularly since about mid April.

This particular site will be featured in the upcoming Mississippi River
Birding Trail publication/map, which a number of birders have been working
on.

*300ft east of Highway 26 at point
1/2 mile south of Upper Iowa River Bridge*
