in 1960s and 70s and 80s
there were many changes in the
way we live and work and
the way we travel and communicate.
In the 1960s there was a
lot of interest in space exploration
and the first man on the moon
was Neil Armstrong. In the 1970s
there was a lot of interest in
computers and the personal
computer was invented. In the 1980s
there was a lot of interest in
mobile phones and the first
handheld mobile phone was
invented. In the 1990s the
internet became popular and
the first website was created.
In the 2000s there was a
lot of interest in renewable
energy and wind turbines
were installed in many countries.
In the 2010s there was a
lot of interest in electric
cars and the first electric
car was invented. In the
2020s there was a
lot of interest in
space exploration and
the first private company
to send people to the
International Space Station
was Blue Origin. In the
2030s there will be
a lot of interest in
artificial intelligence
and robots will be
used in many industries.
In the 2040s there
will be a lot of interest
in space exploration
and the first human
settlement on Mars
will be established.
In the 2050s there
will be a lot of interest
in space exploration
and the first human
settlement on Mars
will be established.
