Dear Gladys & Pete,

This is to report that we had a Summer Tanager male in our back yard here in Storm Lake on Sunday morning June 15, 1980 from about 9 A.M. until noon. We saw no female. He was gorging himself with ripening mulberries, to the objections of robins. I took pictures, slides in 35 mm. color. Haven't seen them yet.

Once before during our 33 years at this address did we see a male summer tanager. That was on Friday, May 2, 1975. He was in our sugar maple on the lawn in front (north) of our house. We didn't see the female then, either.

Very truly yours,

*Ed Crocker*
