It appears the Des Moines Peregrines have successfully fledged. Tonight they were both on the roof of the American Republic Building. If you want to try to see them, you should get downtown soon as they won't hang around this building long once they've tested their wings for a few days.

Two things to look for if you aren't sure if you're looking at a young bird or adult -- the young have "blue" beaks, and they have a beige band on the tip of their tail. This band is visible from several blocks away with a scope.

Jane Clark
