Wilson Bull 28:130-138.

69. *Elanoides forficatus*—Swallow-tailed Kite. Mr. Webster tells me that this species was formerly fairly common, but could give me no definite data. Mr. Waller also corroborates Mr. Webster's statement. So far as I know, it has not been seen in this county within the last twenty years.

76. *Elanoides forficatus* (Linn.) Swallow-tailed Kite. Mr. Webster tells me that this species was at one time tolerably common, but could furnish no further data. John R. Waller says that he has occasionally shot specimens. There is a single specimen, probably taken in the county, in the Miles collection. Considerably to my surprise C. H. Belanski and I identified a specimen of this bird at Hackberry Grove, in Cerro Gordo County, on May 28, 1916.]

Elanoides forficatus forficatus (Linnaeus). Swallow-tailed Kite

Very rare. This beautiful bird was formerly a fairly common summer resident throughout the state, but by 1880, apparently, it was considerably reduced in numbers and was thereafter observed most frequently as a migrant. The last migratory flight of any size is mentioned by W. W. Searles, of Lime Springs, Howard County (Iowa Ornithologist, I, 1895, p. 90) who found them abundant for three days during May, 1888.

Records of this bird in Iowa since 1900 are indeed few. An adult specimen taken during the fall of 1901 by D. J. Bullock in Jasper County, is now in the Bullock collection, Des Moines. An immature male was collected at Cedar Rapids, Linn County, September 20, 1903. It is now in the Coe College collection. Another taken in Sheridan Township, Poweshiek County, September, 1907, is in the collection at Grinnell College. The collector is unknown. Spurrell (1917) says: "Mr. Lee reported the swallow-tailed kite as rare, with the last one seen in 1908." Nauman records (Palimpsest, V, p. 137) seeing one flying over the town of Sigourney during the summer of 1910. Bailey (1918) states: "The last recorded observation of this bird in Iowa was made by J. H. Scott, of Iowa City, on Wapsipinicon River near Independence in August, 1912." One of the two specimens of Swallow-tailed Kite in the Shaffer collection, Jefferson County Library, Fairfield, was killed by B. F. McElhinny in 1913, in Jefferson County. Fenton (1923-24) records one seen by C. H. Belanski and himself at Hackberry Grove, Cerro Gordo County, May 28, 1916. Myron H. Swenk records (Wilson Bull., XLIV, p. 182) a specimen killed by a farmer early in July, 1931 along the West Nishnabotna River, a few miles southwest of Oakland, Pottawattamie County, Iowa. The specimen was mounted by Karl Schwarz of Omaha, and is now in Swenk's collection, Lincoln, Nebraska.

Besides the five Iowa specimens mentioned above there are several others taken prior to 1900. One in the U. S. National Museum, Washington, D. C., was taken at Sioux City by D. H. Talbot. Another Talbot specimen was collected by J. F. Baker at Sioux City, Woodbury County, April 8, 1883. It is a male, and is in the collection of the University of Iowa Museum. A mounted specimen, taken by J. B. Atkins in Jasper County, is in the Parker Museum at Grinnell College. Three specimens from Scott County, without dates, are in the collection of the Davenport Public Museum. Two of the specimens were taken by S. C. Bowman and the other by W. L. Allen. A second specimen in the Shaffer collection, Fairfield, was probably taken in Fairfield County by J. M. Shaffer, sometime before 1900. Fenton (1923-24) states that there is a specimen in the Miles collection, Charles City, which was probably taken in Floyd County. Spurrell (1917) records that one in the H. B. Smith collection, Odebolt, was taken in Ida County.

Bailey (1918) recorded this species as a former breeder in Woodbury, Crawford, Carroll, Greene, Decatur, Blackhawk, and Benton counties.
