IOWA BREEDING BIRD ATLAS DOCUMENTATION FORM

What species? Golden Eagle How many? one	and dre
Location: County Fayette Block 155 Auburn Township	
Location in detail Section 3 n, Three miles northeast of St	neolop
Lucas. Observed in flight heading due south	(apt to
Habitat? Paleozoic Plateau region, bluffs, scattered timber	
When? date? 26 May 1986 Time: 6:24 PM to 6:25 PM	Ardsans
Observer? Name: Mark A. Dietzenbach	ing gards idad hugs
Address: RRt #I P.O. Box 72 Fort Atkinson Iowa 52144	
Telephone: (319) 534-7775	

Description of bird(s): include size, shape, detailed description of all parts including bill, eye, head, neck, back, wings, tail, throat, breast, belly, undertail, legs, feet; also voice and behavior. Use additional sheets if necessary.

Very large dark bird, gliding flat winged toward me from the north at a hieght of about 500 feet. As it passed over the following obserbations were made. The underside appeared uniformly dark with the wing linings appearing black. The head was definitely feathered, the tail slightly fanned. The entire bird proportioned like that of a Buteo except the wings were much longer. As I continued to observe I took note of the distinct flight pattern, soating flat winged with occasional wing-beats, usually three or four in succession then another long glide. Flight was steady and in one direction, no tilting or rocking. Estimated flight speed

Similar species and how eliminated: Turky Vultures are smaller, thier head is small and not feathered. They scar in a diherdral rocking and tilting unsteadily. Bald Eagle imm. has white areas in the wing linings, and shorter tail.

Did anyone have reservations about identification? If so, explain: no

look, nostelet gineok, foek, gromenil jabila Ami-

How long after observation were field notes made?

Viewing conditions: lighting, distance and how measured, optical equipment used. Clear sky, evening sun shining on subject below and from behind me. Hieght approximately 500 feet. equipment used; & X 40 - I6 X 40 binoculars, with zoom.

Golden Eagle; several have been observed during past winter, and spring migration. One at close range while it was perched on rocky ledged. I am familiar with thier flight pattern.

Turkey Vultures; common summer resident, seen frequently, I am very familiar with thier physical and behavioral characteristics.

Bald Eagle imm. common migrant, winter resident, seen often along river.

BREEDING BEHAVIOR: Give all details observed that indicate that the species breeds on the block. If nest, eggs, young, or courtship display were observed, describe in detail.

No evidents of nesting at this time, other than bird observed in area during breeding season.

Description of bird(s): include size, shape, detailed description of all parts including bill, eye, head, neck, back, wings, tail, throat, breast, belly, undertail, legs, feet; also voice and behavior. Use additional sheets if necessary.

Very large dark bird, gliding flat winged toward me from the north at a bleght of socut 500 feet. As it passed over the fullowing obserbations were made. The underside appeared uniformly dark with the wing linings appearing plack. The head was definitely feathered, the tell slightly ladned. The entire sinc proportioned like that of a Sutec except the wings were much longer. As I dontinued to observe I took note of the distinct flight pattern, scating list winged with occasional wing-peats, usually three or

If books or other birders were consulted before writing up the documentation, please list them here:
