Details on Prairie Falcon:

Seen at Hitchcock Nature Area, five miles north of Crescent in Pottawattamie County on October 25, 1994 at 11:33 am. It was flying low over our observation point. It was a large falcon. Light colored below with light streaking on the breast and belly. It had black axillars. It was close enough that we could see a narrow dark mustache mark extending vertically below the eye.

Steve Dinsmore was also present. He may be able to give you some additional details on the bird.
