VOTE: 5 NA

NA, A female reported to have been taken near Kingsley and
mounted by Anderson. I do not know whether the No. 4367 refers to
a museum number or Mr. Anderson's number. Stephens, a highly
respected ornithologist, does not say whether he saw the
specimen. DuMont does not mention looking for the specimen, but I
would guess that he asked about it./thk

Stephens, T. C. 1930. Bird records of the two winters, 1920-1922, in the upper Missouri valley. Proc. Iowa Acad. Sci. 37:357-366 (361).

FERUGINOUS ROUGH-LEG, *Archibuteo ferrugineus*. Two specimens were mounted by Mr. Anderson, as follows:

Oct. 3, 1921, a female from near Sioux City, Iowa. No. 4272. This was a very dark specimen.

Nov. 23, 1921, a female reported to have been taken near Kingsley, Iowa. No. 4367.

Buteo regalis (Gray). Ferruginous Rough-leg

An irregular and decidedly uncommon migrant in the western part of the state, rarely straggling into the eastern portion. Bailey (1918) recorded it as occurring in Blackhawk, Linn, Woodbury, Pottawattamie, and Mills counties. No doubt this record was based upon the county records as published by Anderson (1907). The observation of this bird in winter, as reported by Berry in Linn County, may well be discredited, lacking substantiating evidence.

Bennett (1931) recorded it as an uncommon migrant in the Sioux City region. DuMont (1931) recorded that a pair of these birds was observed by Mr. and Mrs. J. E. Stewart at Brenton's Slough, Polk County, May 5, 1929. On June 6, 1929, a pair was seen at the same place by A. T. Watson, K. R. Nelson, and the writer. Nauman reported one seen near Sigourney, Keokuk County, April 2, 1919, and two in the same locality, March 28, 1923. Spiker (1924) recorded one found hanging on a fence, November 4, 1914 in Wapello County. Pierce (1930) observed a single bird on his farm in Buchanan County, March 17 and 19, 1926. Another was seen near Hazelton, in the same county, April 13, 1930.

A female, taken at Cedar Falls, Blackhawk County, June 25, 1901, is in the collection of Iowa State Teachers College, Cedar Falls. Stephens records (1918) that A. J. Anderson of Sioux City mounted one of these birds September 17, 1917 which had been shot at Brown's Lake, Woodbury County. Two other specimens mounted by Anderson were recorded by Stephens (1930). One was a female, taken near Sioux City, October 3, 1921, a very dark specimen; the other, also a female, reported to have been taken near Kingsley, Plymouth County, November 23, 1921.

IBL citations are for Field Reports, Christmas Bird Counts, Bird Banding Summaries, and Records Committee Reports in Iowa Bird Life; doc = documentation on file with Records Committee; no detail = no description of the bird; RC() = Records Committee (record number); Clark = William S. Clark; + = accepted record; - = record not accepted.

Reports since 1970 were all from fall and winter (September through February). Most were from October (5), December (5), and February (4), months when this species is expected. Of course, other hawks, including Krider's Red-tailed Hawk (*Buteo jamacensis krideri*), also migrate through and winter in Iowa during these months and may be confused with Ferruginous Hawk.
