Numenius Borealis—Latham.

Esquimaux Curlew.

Found along the seashore from New York to Cape May, New Jersey. I have found it in Iowa in May, migrating westward.

118. (266). *Numenius borealis* (Forst.). Eskimo Curlew.

The Eskimo Curlew is also a rare migrant in Iowa. It was listed by Allen (White's Geol. of Iowa, ii, 1870, 426), and John Krider says: "I found it in Iowa in May, migrating westward" (Forty Years' Notes, 1879, 68).

County records: Des Moines—Mus. No. 16803, taken at Burlington, April 5, 1893, by Paul Bartsch. Jackson—"rare transient" (Giddings). Johnson—specimens in University museum taken by Frank Bond (Nutting, Proc. Iowa Acad. Sci., 1892). Van Buren—"spring migrant, very rare" (W. G. Savage).

Phaeopus borealis (Forster). Eskimo Curlew

Extinct in Iowa. It had been greatly reduced in numbers before 1907, when Anderson wrote of it as follows: "The Eskimo Curlew is also a rare migrant in Iowa. It was listed by Allen (White's Geol. of Iowa, ii, 1870, 426), and John Krider says: 'I found it in Iowa in May, migrating westward' (Forty Years' Notes, 1879, 68).

"County records: Des Moines—Mus. No. 16803, taken at Burlington, April 5, 1893, by Paul Bartsch. Jackson—"rare transient" (Giddings). Johnson—specimens in University museum taken by Frank Bond (Nutting, Proc. Iowa Acad. Sci., 1892). Van Buren—"spring migrant, very rare" (W. G. Savage)." The specimen taken by Bartsch is now mounted in the University of Iowa Museum, but those taken by Bond cannot be found. There appear to be no Iowa records of the Eskimo Curlew after 1893. The writer recorded (1931) that a pair was shot by C. H. Schroeder at Des Moines, Polk County, about 1893. These specimens were presented to the Iowa State Historical Society, but cannot now be found. Besides the Bartsch bird the only other Iowa specimen is a female, No. 10158, in the Davenport Public Museum. It was collected by S. G. Bowman, April 20, 1874, in "Northern Iowa."
