Rough-leg. IBL 9:8.
Wilson 1988.

VOTE: 5 NA

NA, Bill Clark reviewed this record for Barb Wilson and did not accept it ("IV"). Three birds would be very unusual. The leg feathering, light under parts, and rusty back are suggestive of Ferruginous Hawk. I don't know the observer. Leg feathering is easy to misjudge and we are not given the color. Light under parts fits several species. The back is described as dark with prominent rusty markings -- what does that mean? This is a species where each mark adds up, because each is open to misinterpretation and variation among individuals of a species./thk

Ferruginous Hawk

Johnson, Mrs. R. W. 1939. A record of the Ferruginous Rough-leg. IBL 9:8.

A Record of the Ferruginous Rough-leg.—On January 2, 1939, my family and I saw three Ferruginous Rough-legged Hawks, near Iowa City. They were seen a mile or two apart, a single individual each time. One arose from a fencepost unexpectedly when we were very near, and we had opportunity to see the legs feathered to the toes. We observed the light under parts and dark back with prominent rusty markings.—MRS. R. W. JOHNSON, Dubuque, Iowa.

IBL citations are for Field Reports, Christmas Bird Counts, Bird Banding Summaries, and Records Committee Reports in Iowa Bird Life; doc = documentation on file with Records Committee; no detail = no description of the bird; RC() = Records Committee (record number); Clark = William S. Clark; + = accepted record; - = record not accepted.

Reports since 1970 were all from fall and winter (September through February). Most were from October (5), December (5), and February (4), months when this species is expected. Of course, other hawks, including Krider's Red-tailed Hawk (*Buteo jamacensis krideri*), also migrate through and winter in Iowa during these months and may be confused with Ferruginous Hawk.
