

Sabine's Gull  
< 1933  
Scott Co., IA  
W. L. Allen  
DuMont 1933

Record Number: 93-ES  
Classification: NA

REFERENCE

DuMont 1933 [refers to Putnam Museum specimen #10215]

VOTE: 5 NA

NA, Although likely seen by DuMont, he did not even mention whether it was a juvenile or adult. The date is not given and we are left to believe that Allen's specimens were from Scott County. We need to see whether the specimen is still available and whether we can get more information about Allen's collection.  
/thk

*Xema sabini* (Sabine). Sabine's Gull

A casual visitor. There are three Iowa specimens. Two in the University of Iowa Museum were taken by Paul Bartsch at Burlington, Des Moines County. No. 15981, a male (?), was secured October 15, 1891, and No. 15982, a female, was collected October 12, 1894. One in the Davenport Public Museum, No. 10215, was taken in Scott County, by W. L. Allen. Date and sex were not recorded.
