Alder Flycatcher

Brown, W. H. 1974. Field reports. Iowa Bird Life 44:44

Flycatchers -- These were thought few (RM). A "fe-be-o" call heard on 15 May (NH) indicates the presence of the Alder Flycatcher instead of the Willow which is to be expected here. A Scissor-tailed Flycatcher was well seen at 10 feet in Dollivar State Park on 22 April by Jim Farnsworth (fide Milton Weller). A Great Crested netted on 14 May by Keith Layton had previously been banded by him in July, 1967.
