white underparts, which were not washed with yellow, were observed. Awhite, rather than a buffy yellow eyestripe, was seen, and the
Type of habitat? A fast-moving, Sreshwater canyon stream, lined intermittently with trees. When? date(s): April 2, 1982 time: 7:25 AM to 7:30 AM Who?your name and address: John C. Robinson / 1401 Oakdene st. / Pittsburgh, Pa. 15:206 others with you: Bill Robbins, Mark Loeschke others before or after you: Describe the bird(s) including only what you observed. Include size, shape, details of all parts (bill, eye, head, neck, back, wing, tail, throat, breast, belly, under tail, legs, feet). Also mention voice and behavior. Approximately 5 inches in length, this bird was flushed from the stream bed near the lower part of the Canyon Trail. It alighted in a nearby tree, at which time the bobbing motions characteristic of waterthrushes was observed. Immediately after perching in this tree it sang, a song consisting of 13 introductory sluvred whistles followed by a vapid sequence of notes which descended in pitch. This song was given twice. A sharp, loud call note was then utterred and the bird flew to a neighboring tree located approximately at the pos, from where the other two observers were standing, After singing twice in this tree it flew to a think white in this towe it flew to a think white underparts, which were not mashed with yellow, were observed. Awhite, rather than a bussy yellow eyesting a way feen and the side of the side of the street of
Type of habitat? A fast-moving, freshwater canyon stream, lined intermittently with trojes. When? date(s): April 2, 1982 time: 7:25 AM to 7:30 AM Who? your name and address: John C. Robinson / 1401 Oakdene st. / Pittsburgh, Pa. 15206 others with you: Bill Robbins, Mark Loeschke others before or after you: Describe the bird(s) including only what you observed. Include size, shape, details of all parts (bill, eye, head, neck, back, wing, tail, throat, breast, belly, under tail, legs, feet). Also mention voice and behavior. Approximately 5 inches in length, this bird was flushed from the stream bed near the lower part of the Canyon Trail. It alighted in a nearby tree, at which time the bobbing motions characteristic of waterthrushes was observed. Immediately after perching in this tree it sang, a song consisting of "3 introductory sluvred whistles followed by a vapid sequence of notes which descended in pitch. This some was given twice." A sharp, loud call where the other two observers were standing. After singing twice in this tree it flew to a third which it sat and continued to sing while all three of us approached it to within 30 Sect. All buffy yellow eyesting.
