Dear Tom

I will try to answer some of your questions. I did give these people the documentation forms as to whether they will send them in I can not say. The Ron Harms photos ~~are~~ have the correct date on my report but I did not see either the Hoary Redpoll or Burrowing owl. The Jardine bird is one of the Hoaries I was referring to. The Harms Redpoll was from his feeders and Laurens.

The Black-headed Grosbeak I tried to see but, was unable to locate after about 3/4 hour. The yard habitat is perfect for Grosbeaks, but that all I can say. It was relocated on three ~~times~~ different occasions by different groups, all beginners except Ron Harms.

The House Finch which only Wallace Jardine was able to see is convincing to me, since he saw the side striations and is familiar with purple finches. Plus a purple finch in June would be extreme late. ~~also~~

R
