

1-25-98 Savannah Sparrow Warren Co.

I identified this bird based on several features:

- small size, light build
- pale overall coloration
- streaking on breast and sides
- pink legs
- yellow wash above the eye

The bird also had a very extensive central breast spot. It was very tame, letting me drive to about 10 yards away before it ran from the edge of the road into the grassy ditch. The picture was taken from considerably farther away.
