Spring 1983

Weather: Weather conditions were cool and wet during most of the period.

Trends: Most species were late in migration, no doubt, due to bad weather in Early April. Major movement of Purple Martins were two weeks late. Warbler numbers were down here also.

✓ Great Egret: Seen on April 4.

✓ Purple Martin: First sighting March 31.

Eastern Bluebird: Numbers about the same as last year.

✓ Cape May Warbler: Seen on April 17.

✓ Morning Warbler: Seen on May 26.
