Feb. 16, 1983

Dear Dr. Kent,

In looking over the Fall 1982 field reports, I've noticed that very few records are reported of tufted titmouse.

- ✓ Two come to my feeding station regularly--have done so since early fall, when I began putting out feed again after a layoff because of hiatal hernia surgery. In the past, at least two have been regular visitors year-round. Anyway, there are at least two in a timbered area near Vets Hospital in Des Moines.
- ✓ Also, a red-headed woodpecker is wintering in the area; it comes to my feeding station almost every day. (Probably every day and I just don't happen to see it.)

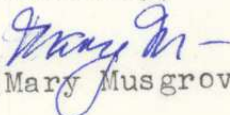

I see very few other woodpeckers. The winter is so open that I haven't put out a suet feeder. Whenever the nights are fairly warm, the raccoons start prowling and over the years Jack and I have lost quite a few homemade suet feeders to them; this year, there have been very few nights I'd have been sure the feeder was safe from them. The coons themselves are fun to watch; we formerly fed them dog biscuits every night, a practice I hope to resume in the spring.

As for other winter birds. Except for juncoes--none until about Feb. 9 when a tree sparrow showed up. I've seen very few winter small birds out in the country the few times I've been out. In such a mild winter I suspect they've stayed farther north than Des Moines.

Anyway, for what it's worth--two winter records, both at a feeding station in Des Moines: tufted titmouse, two, regular visitors; red-headed woodpecker, one, regular visitor all winter.

A trip to DeSoto Wildlife Refuge in mid-January, to get away from cabin fever, turned up nothing except a small flock of mallards at Wilson Island State Park on the Missouri. A trip Feb. 13 around Saylorville and Big Creek lakes turned up nothing of interest, except some ice fishermen on Big Creek amid the slush of thawing snow, and a lot of fishermen at the Saylorville outlet--enough to scare away any interesting birds. I enjoy the field reports, appreciate the work done on them.

Sincerely,

  
(Mary Musgrove)
