Dear Tom,

I did a "raptor survey" near New Albin February 6, finding only the usual Rough-legs & Red-tails, several of the latter evidently paired up.

✓ Did see several Lapland Longspurs with Horned Larks in a feedlot.

If you have a record report form to be sent in quarterly or whenever, you might send me a supply. I plan to continue birding in Iowa regularly.

Not many rarities this winter. A Greater Black-backed Gull & Hawk Owl at Duluth.

Sincerely,
Fred Leshner
