

9-29-85

Iowa Ornithologists Union

I am writing in the hope you can identify the bird in the enclosed picture. It was taken on 9-13-85 in a pin oak tree in my front yard in a residential district here in Cedar Rapids. I suspect it is some kind of migrating warbler. I know the picture is far from ideal but it was the only shot I got as the bird quite rapidly hopped from branch to branch.

Any information you could supply including a positive identification, habits, and range of this bird would be greatly appreciated. You can keep the picture.

Thank you
