

Dear Jim,

12 June 1966

Thanks for the papers. The tern studies are progressing with many questions. Does the ISU department have aerial photos of Rush Lake and Dan Green Slough from when Bergman, Swain, and Weller were doing their studies? Do you have a means of obtaining these records or getting present photographs? If not, I will contract someone here.

For whomever is keeping bird sightings this summer: There was a Common Moorhen at Jemmeson Slough on 4 June and White-throated sparrows at Lakeside Lab on 6 June. ]

See you sometime. Thanks

Neil Bernstein
