FIELD REPORTS FORM for	° subm	itting sea	asonal observations of Iowa birds Page <u>1of</u> 2				
Season: <u>Summer</u> Year:	1993		ne and Douglas Harr				
ther observers (name of	+++1.		iress				
Other observers (name, city): (print PO Box 65 or type)							
			Larchwood, Iowa 51241				
		l	Jse first few lines to give weather and habitat				
		. 9	conditions. Use line(s) below species data to give additional details, if needed. Mail to: . H. Kent, 211 Richards St., Iowa City IA 52240				
use initials of obsv. on	specie		by 1 Mar, 1 Jun, 1 Aug, or 1 Dec.				
SPECIES	NO.	DATE	LOCATION - COMMENT - OTHER OBSERVERS				
			a, the northwestern part of the state was				
10 and 20 inches of rain	for t	he two-mo	and July, with many areas receiving between nth period. Personal observation and conversations				
			caused much nest destruction, especially of ver, appear to have thrived, with perhaps the				
best wetland habitat for	ducks	in at le	ast a couple of decades. Late July saw a letting-up				
of the rains and possibi	lity o	f renewed	late nest attempts by some species.				
Season's observations of	note:						
Cattle Egret	6	7/7-7/9	Little Sioux River floodplain wetlands, 6 mi. west of Spirit Lake (the same area in which they				
			have been seen periodically in past years)				
Hooded Merganser	1	6/11	adult female on gravel pit pond, 7 mi. SW of Sioux Center, Sioux County. (Injured?)				
Barn Owl	1	7/27	1/2 mi. S. of Larchwood, Lyon County. I received call from retired farmer to come and identify a				
			"large bird" sitting on his silo at dusk. When				
			I arrived, I could see the silhouette against				
			the almost dark sky, but was too dark to get positive visual ID with binoculars. Bird				
			called about a half-dozen times (typical harsh screech of Barn Owlcompared with taped calls				
			screech of Barn Owlcompared with taped calls later), then flew off to perch on distant wind-				
			mill on neighboring farm. The farmer who called				
•			me said the birds had been in his old barn for				
			two months, and examining the building by flash-				
			light, I found some cast pellets on the floor. I returned to farm on 7/28 & 7/29 at duskthe				
			time the farmer usually spots the owls (he says				
			there are normally two), but I have not seen				
	-		them again. I did hear a distant call on 7/29, however, but due to nearby traffic, could not				
			discern location of sound. I'm reporting this				
			as a sighting for the summer season, but will				
			attempt to more positively verify species in				
			August. (Owner would prefer that I not check the barn during daytime, as he does not want				
			the birds frightened away.)
