SPECIES	NO.	DATE	LOCATION - COMMENT - OTHER OBSERVERS
Correction:			
in Fall '93 report		Red-eyed Vireo	feeding Cowbird reported
Weather: March + April		was	Aug 29 <u>not</u> Sep. 29.
but not very conducive		to	bird fallouts. Dry!
1 Great Blue Heron	7	May 10	Des Moines R. near Plum Creek
nest building observed on this day, but no further sightings at the location			
2 Tundra Swan	2	March 24	USNWR (seen by refuge personnel)
3 Cattle Egret	10	end of May	areas around USNWR m.ob.
4 Ross' Goose	1	May 22	Myre Slough Winn. Co. Mallard-sized
(with mallards) "Snow"			Goose with round head, short bill (shorter than ducks) 4?
5 White-winged Scoter	1	May 22	farm pond E. of Myre Slough
dark brown duck, slightly smaller than Mallard. 30 yds away with scope			
slight bulge on upper bill between forehead + nostril, feathers on sides			
of bill almost to nostril. Pale belly/underwing as bird			
tipped up + flapped, but apparently couldn't fly. White secondaries -			
small patch (white) on right side, huge white patch on left. I			
believe the bird had a wing injury as it ^(left wing) wasn't laid correctly			
on bird as it swam. Life Bird for me.			
6 Sharp-shinned Hawk	3	March 20	Patterson Wildlife Area near Burt early migrants
7 Red-shouldered Hawk	1	May 24	flying north over Algona I've got no clue
where this bird might be going - may have been 1+ old non-breeder?			
8 Broad-winged Hawk	3 (total)		individual birds about 1-2 weeks apart
only ones seen this spring! Algona.
