

An unusual spring, cool but dry. The bird migration seemed atypical, however I had limited time in the field. The first warbler sightings were a little late. The peak appeared approx. May 15. The week of the 13th was especially warm & I suspect that warbler migration was intense in this week but have no evidence.

<u>Name</u>	<u>first seen</u>	<u>last seen</u>	<u>Location</u>
Eastern Wood-Pewee	05-15-94
