

August 21, 1996

Dear Jim,

1. Gray Partridge - Appanoose County. Paul Egeland and Dan Tiemier were with me on 6-15-96. This is our summer bird count for our club. One was a male with chestnut belly patch. The other did not have a belly patch and we assumed it was female.
2. Piping Plover - Just a colored band. On August 13 of '95, I observed a Piping Plover in the same location with 1 white band on each leg. I am interested in finding out where they were banded. I know they have a banding program sponsored by the ABA in North Dakota.
3. Sanderling - I saw 6 on July 16th, ~~16~~ on July 20th. Mary Montgomery came out after I called her. I saw 12 on July 21st. Reed and Pam Allen were there for a time.
4. Herring Gull - I apologize, I only know they were brown and scruffy looking. They were immature. (1st or 2nd?)

Sincerely,

*Tom Johnson*  
Tom Johnson

Thanking you for asking me for info. I never  
mind.
